### ALK NSCLC IHC REPORT

#### ALK IHC RESULT

STRONG POSITIVE (FISH will be performed)

WEAK POSITIVE (FISH will be performed)

NEGATIVE

#### TEST INFORMATION & COMMENTS

This assay is FDA-approved and uses the Ventana/Roche ALK D5F3 antibody to detect ALK protein in formalin-fixed paraffin-embedded (FFPE) non-small cell lung cancer (NSCLC). It is used to identify patients with advanced disease who may be eligible for treatment with Crizotinib, Ceritinib or Alectinib. If the result shows either weak or strong positive IHC staining it will be automatically reflexed for ALK FISH analysis to confirm gene re-arrangement status. Approximately 8-10% of cases are reflexed to FISH (weak and strong positive). Overall ALK positivity rate is between 2-3% (IHC positive & FISH positive).
